

The 2nd Quarter of FY 2004 CID REPORT

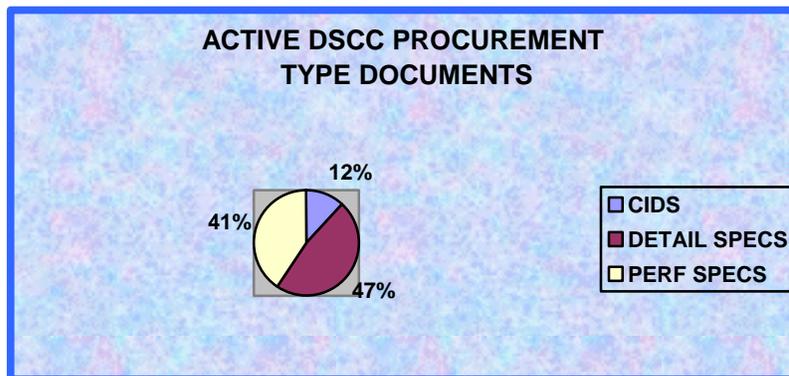

This report documents the efforts of the Document Standardization Unit (DSCC-VA) in the development of Commercial Item Descriptions for electronic and hardware commodities.

2nd QUARTER CID ACTIVITIES

The following bullets highlight the CID activities for just the second quarter of FY 04:

- New CIDs Published 4
- Overage CIDs Validated or Revised 17

The four new CIDs were on electrical fuse clips, surface mount inductors and surface mount coils. The revised or validated CIDs were on electrical fuse clips, resistors and a multitude of hardware items including elbow joints, pipe to tube adapters and a testing tank. DSCC continues to be flexible in their documentation applications as can be seen in the chart below. The continuing trend for our active performance based procurement specifications is around 53% with 12% of that number being contributed to CIDs.

We at DSCC are continuing our diligent efforts to realize the DLA Vision and the NEW DSCC WAY by providing *the right item, right time, right place, right price, every time...best value solutions*. All of the DSCC documents can be found at the following DSCC-VA web site:
