3rd Quarter, FY 2004

Quarterly Update:

DSCC serves as the Preparing Activity or technical agent for thousands of standardization documents covering a wide variety of electronic components and other items. Our engineers and technicians coordinate and prepare technical documents in 85 Federal Supply Classes and provide engineering support to DoD customers using these documents. Customers are able to view or download electronic copies of the specifications, standards, handbooks, drawings, and commercial item descriptions from our web site. Documents available for download are currently over 16,800.

One of the most useful tools on our web site is the Standard Microcircuit Cross-Reference. This search tool provides a cross-reference of microcircuits covered by Standard Microcircuit Drawings, MIL-M-38510 specifications and Vendor Item Drawings. Here you can find approved sources, equivalent military part numbers, preferred part numbers, and more. With each search, you will receive a brief listing of parts meeting your criteria, from which you can choose to see more details for each part found. Detailed information includes package descriptions, end-of-life dates, Radiation Hardness Assurance levels, and links to the corresponding military specifications or drawings. This search tool has been used over 91,000 times during this quarter.

The most accessed documents on our web site for this quarter are the Military Performance Specifications (MIL-PRFs), Military Standards (MIL-STDs), and the Standard Microcircuit Drawings (SMDs).

The chart below depicts the new major web statistics for the 3rd quarter of FY 2004.
